Climate Change is Biggest Cause of Stress on World's Oceans

Marine species and habitats have long experienced detrimental impacts from human stressors, and these stressors are generally increasing globally. These include climate-related impacts such as rising temperatures, acidifying oceans and exposure to UV radiation as well as pollution, fertilizer run-off, marine traffic and fishing. [Read More](#)

Exxon Knew of Climate Change in 1981, But Funded Deniers for 27 More Years

The company was aware of the connection between fossil fuels and climate change, and the potential for carbon-cutting regulations that could hurt its bottom line, over a generation ago factoring that knowledge into its decision about an enormous gas field in Southeast Asia. [Read More](#)
